

The Arrest of the Guest Pest

We Believe Physical
Security is just as
Important as Digital

So We Set Out to Solve It

- ◇ Real Time Data Processing
- ◇ Machine Learning to detect when an item has left the frame
- ◇ Rapid and Reliable 'flight' signal

Our process is easy

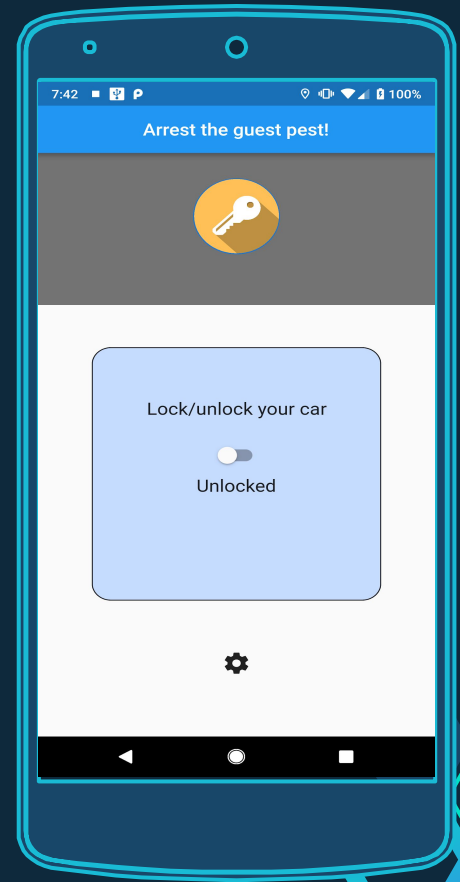

Lock Your Car from
your Phone

We monitor
to keep it
safe

We alert in
the event of
an
emergency

- ◇ It all starts by initiating the lock from the mobile app
- ◇ The signal is sent through Firebase to Azure so our system starts processing images in real time
- ◇ In the event of an emergency, Azure sends a 'flight' signal to our app which alerts the user to the impending crime

You Decide How AGP Responds

Alert

The first option is a simple alert to your Internet of Things device.

'Nuclear' Option

Available to law enforcement only, able to change traffic lights to red to make a quick response easier.

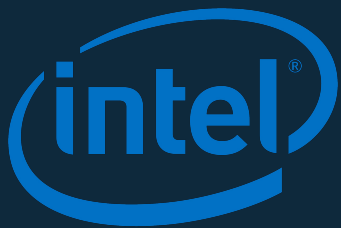

911

Also available is the ability for it to notify the police. This is only activated after you don't silence the alarm that is sent to your phone.

All of This
Powered By

Azure

Thanks!

Any questions?
